DEVARSHI MEWADA

Data Analyst | Data Engineer
Ahmedabad, India | +91 9586155555 | devarshimewada@gmail.com | Linkedin: devarshimewada22

PROFESSIONAL SUMMARY

Data analyst and data engineer with hands on work in SQL, Python, and business intelligence. Builds reporting on Amazon Redshift and Power BI, cleans and models transactional data, and turns analysis into dashboards and written recommendations. Full time work at York IE covers warehouse querying, semantic models, read only data access, and stakeholder reporting for leads, web analytics (GA4), Salesforce, and product usage.

TECHNICAL SKILLS

Languages: SQL, Python
Data Analysis: Pandas, NumPy, Matplotlib, Scikit learn, Exploratory Data Analysis (EDA), Statistical Analysis, Feature Engineering
Business Intelligence: Power BI, DAX, Tableau, Microsoft Excel, Google Colab
Data Engineering: Amazon Redshift, AWS, Data Warehousing, Data Modeling, Data Pipelines, Semantic Models, Microsoft Fabric, Lakehouse, Direct Lake, DirectQuery
Practices: KPI Design, Data Cleaning, Data Visualization, Row Level Security (RLS), Read only SQL, Technical Documentation

WORK EXPERIENCE

Data Engineer (Full time)
York IE, Ahmedabad | *August 2026 – Present*
- Queried Amazon Redshift for lead, GA4, and Salesforce reporting, and returned each result with the SQL, grain, and caveats a stakeholder can check.
- Built REDSOR, a shared analytics workflow that turns a plain English question into one read only SELECT, using documented joins, date rules, brand views, and monthly recurring revenue logic.
- Defined least privilege warehouse access with a dedicated read only AWS role and SELECT grants, and wrote install steps so teammates can run the same queries.
- Built a Power BI semantic model for website performance covering sessions, users, page views, bounce rate, average session duration, channels, and browsers, with a date slicer and row level security.
- Compared Power BI Import, DirectQuery, and Direct Lake, then wrote a seven phase guide to move Lakehouse backed reports to Direct Lake by rebinding reports instead of rebuilding them.
- Designed a Tableau dashboard of employee Cursor AI usage (tokens used, cost, active days, and engagement) to flag low adoption and support monthly operational reporting.

Data Scientist Intern
York IE | *August 2025 – August 2026*
- Worked through end to end analysis on live datasets: cleaning, exploratory data analysis, visualization, and written recommendations.
- Used Python (Pandas, NumPy) and SQL to prepare data and surface patterns for business decisions.
- Built dashboards and visual reports in Tableau and Power BI, and gained working exposure to generative AI and large language model use cases.

PROJECTS

REDSOR — Natural Language to SQL on Amazon Redshift
SQL, Amazon Redshift, AWS, Python | 2026
- Designed an analytics workflow that routes a question to a domain specialist for leads, GA4, or Salesforce and returns a structured brief.
- Encoded warehouse rules so queries start from the correct tables, use approved joins, and keep brand and revenue logic consistent.
- Limited execution to a single read only SELECT and documented the IAM policy and Redshift grants for a shared read only role.
- Built a 33 question evaluation set and a failure log, then corrected wrong literals, joins, and question routing.

Website Performance Dashboard
Power BI, DAX, GA4, Row Level Security | 2026
- Modeled GA4 sessions, pages, channel groups, browsers, and a date table in a Power BI semantic model.
- Created measure tables for users, sessions, page views, bounce rate, and average session duration so KPI definitions stay in one place.

- Built report pages with a date slicer and a row level security role so stakeholders can filter trends without changing the model.

Power BI Lakehouse Migration Playbook
Power BI, Microsoft Fabric, Lakehouse, Direct Lake, DirectQuery | 2026
- Evaluated Import, DirectQuery, and Direct Lake and recommended Direct Lake when source data already lives in a Fabric Lakehouse.
- Documented blockers that must move upstream before a new model is built: Power Query, calculated columns and tables, mixed sources, and row level security.
- Wrote a seven phase plan covering inventory, Lakehouse preparation, model build, KPI validation, report rebind, cutover, and ongoing operations.

Cursor Employee Productivity and Usage Analytics
Tableau, Data Analysis, Data Visualization | 2026
- Built a Tableau dashboard to monitor how teams use the Cursor AI tool.
- Analyzed total tokens used, cost efficiency, active usage days, and employee engagement.
- Identified low adoption users and usage trends so managers can act on productivity and cost.
- Used interactive views so monthly reporting can be repeated without rebuilding the analysis.

Market Basket Analysis and Sales Insights
Python, Pandas, NumPy, Apriori Algorithm, Tableau
- Ran market basket analysis on transactional sales data to find products that are purchased together.
- Implemented the Apriori algorithm and association rule mining to surface frequent item combinations.
- Cleaned and prepared the dataset with Pandas and NumPy before generating rules.
- Designed a Tableau dashboard for product affinity, purchasing trends, and cross sell opportunities that can guide placement and promotions.

EDUCATION

Master of Science in Information Technology
GLS University, Ahmedabad | 2024 – Present

Bachelor of Science in Information Technology
GLS University, Ahmedabad | 2021 – 2024
